

Here are the first 7 solutions that I have had for this puzzle. The first solution was given to me by the person who also gave me the puzzle board. The second and third ones were given to me by others over the years. The last four I received by another person in 1991. The third answer here has a beautiful ending. It produces a tree which one peg goes around removing most of the outer pegs. Answer 9 and 10 was added in 2002 from the web. Answer 10 has also a round the center.

In 2001 I created a computer program that I have run several times and created about 200,000 solutions. I have further reduced that list to 26 main solutions.
