

Here is a sample of two different solutions for each possible starting puzzle with one pegs removed. No two solutions from a group have the same moves, just in a different order. Use the board layout found at the top of the first column. Start the game by removing the peg mentioned in the first line of each solution. The jumps are much like in checkers. The direction of jumping is parallel to the three sides. The first number is the peg doing the jumping, the second number is jumped over and removed from the board. The third number is where the jumping peg lands. Make each of the moves as listed for that game. For all starting solutions with peg 5 removed, the last peg will end at position 13. For this puzzle with all 15 starting positions there were 16654065 games played of which there are a total of 438984 solutions with one peg remaining on the board, of those 179124 will end in the starting hole, of those 199 are unique.
